

eduroam under Chrome OS

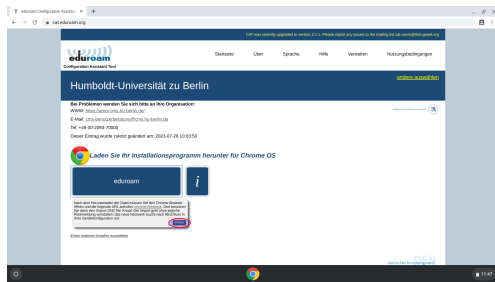

Stand: b'23. November 2023'

1 Preface

The following description was created with Chrome OS 94.4. However, it should be valid for all Chrome OS versions. This instruction guide describes how to connect your chromebook to the wifi *eduroam*.

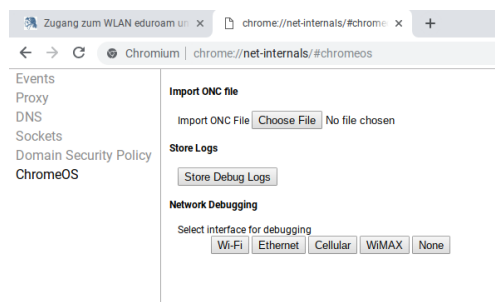

If you already have configured eduroam on your device, Please delete the configuration.

2 Load configuration file

The CMS provides a customized eduroam configuration file for Chrome OS. Connect your Chromebook to the internet (e.g. use a free wifi) and download the configuration file *eduroam-chromeos-HU.onc* from the website <https://cat.eduroam.org/>.

Install profile

After downloading the file, you will need to open the Chrome browser and visit the following URL: <chrome://net-internals/#chromeos>.

Please click there under “Import ONC file” on the **Choose file** button.

letzte Aktualisierung: b'23. November 2023'

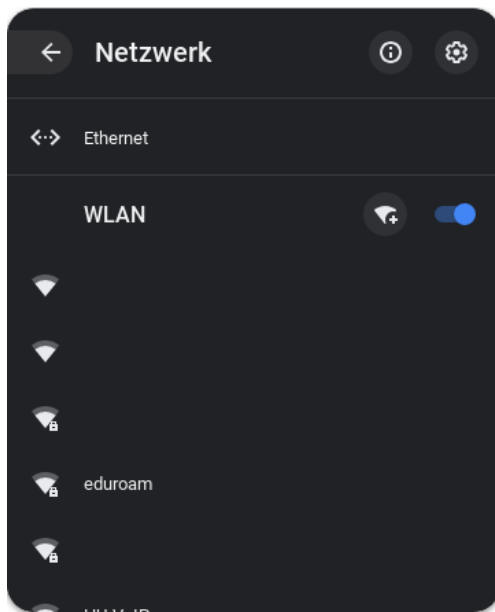

Revision: b'e0a2a83'

Now select the downloaded file *eduroam-chromeos-HU.onc*. The import is performed without any response; the new network will appear after you have completed your device configuration.

Now click on the wifi icon in the lower right corner of the screen. In the newly appearing window click on the wifi icon again.

Select *eduroam*

In folgendes Netzwerk einwählen: WLAN

eduroam

Sicherheit: EAP

EAP-Methode: EAP-TTLS

EAP-Phase 2-Authentifizierung: **PAP**

CA-Server zertifikat: Standardeinstellung

Identität: HU-Account@hu-berlin.de

Passwort:

Anonyme Identität: eduroam@hu-berlin.de

Abbrechen Verbinden

Now enter your HU-account (not your mail address) and current password in the “Identity” input field in the “Password” field. Check the other data, especially “EAP-Phase2-Authentifizierung” must be set to “PAP”. Then click on **Connect**. (This prompt section may look slightly different with newer Chrome OS versions.)

Now you should be successfully connected to the wifi *eduroam*.
